11TH EVENET SYMPOSIUM

The eco-evolutionary dynamics of species communities

7-8th February, Ghent University (Ledeganck)

from local to spatial interactions

EVENET organises its 11th symposium to foster a direct interaction between researchers working in the field of eco-evolutionary interactions. The meeting aims to present the most recent research on the eco-evolutionary processes that underly the organisation of biodiversity in space: intra- and interspecific interactions, dispersal evolution and the evolution of metacommunities.

Invited speakers

Celina Baines (University of Toronto)
Ellen Decaestecker (Leuven University, KULAK)
Emmanuel Fronhofer (University of Montpellier)
Florian Jeltsch (University of Potsdam)
Jonathan Romiguier (University of Montpellier)
Lesley Lancaster (University of Aberdeen)
Marc Urban (University of Connecticut)
Pedro Peres-Neto (University of Concordia)

Meeting themes

- Eco-evo of dispersal and species distributions
- Eco-evo of microbiomes and host-parasite interactions
- Individual-based global change ecology
- evolutionary genomics and reproductive systems
- evolving metacommunities

Registration

We encourage ECR to present their work. Participation to the symposium is free, but registration is mandatory (deadline December 15th).
